EUROPEAN ECODESIGN AND ENERGY LABELLING REGULATIONS

Heat Pumps
### CIAT: RESPONSIBLE THINKING

Designing products and solutions with a lesser impact on the environment and smaller energy consumption lies at the heart of CIAT’s longstanding engagement for sustainable development, in keeping with the European climate and energy package objectives for 2030.

- **-40%** Greenhouse gas emissions
- **27%** Energy efficiency improvement
- **27%** Share of renewable energy

The heating, ventilation and air conditioning (HVAC) market is primarily concerned by this energy efficiency improvement policy.

Buildings being the largest energy consumers and HVAC systems accounting for the better part of this consumption, providing users with energy efficient solutions is both a challenge to be met and a major sustainable development opportunity to be seized by the HVAC industry.

### THE ECODESIGN REGULATION

The objective of the Ecodesign directive is to bring manufacturers to design their products so as to reduce their environmental impact throughout their life cycle. Most important, the Ecodesign Regulation N° 813/2013 sets mandatory energy efficiency requirements for air-to-water and water-to-water heat pumps up to 400 kW.

### MEASUREMENT

**SCOP: A NEW WAY OF EVALUATING ENERGY EFFICIENCY**

Contrary to the COP (Coefficient of Performance) which measures power consumption in the heating mode from a single point of analysis, the SCOP (Seasonal Coefficient of Performance) takes into account the seasonal variations of outside air temperature, using several operating points, thus bringing more precision to the procedure. Both these coefficients will be used to determine which energy efficiency class a heat pump belongs to.

### PRIMARY ENERGY EFFICIENCY MEASUREMENT: \( \eta_s \)

In order to compare the energy efficiency of products using different sources of energy, such as boilers (gas, fuel) and electric heat pumps, the Ecodesign regulation introduces a new measurement expressed in primary energy: \( \eta_s \) (eta s).

\[
\eta_s = \frac{SCOP}{2.5 \times 100 - i} \quad \text{*}
\]

*Air source heat pump \( i=3 \)
Water source heat pump \( i=8 \)

### Example

- **Primary energy**
  - **Heat pumps:** 3.13 kW
  - **Boilers:** 2.15 kW

### Source

- Ecodesign & Energy Labelling Report
- World Business Council for Sustainable Development Report
- EU Regulation 813/2013
THE ENERGY LABELLING REGULATION

The objective of Energy Labelling is double: give clear understandable label information on the product energy efficiency, and classify products according to their level of efficiency (from A to G), with an overall effect of pulling the market towards more energy efficient products.

All CIAT heat pumps under 70 kW are labelled A to A++

Both Ecodesign and Energy Labelling regulations entered into force in September 2015. Products marketed prior to this date are not affected. The next regulations upgrade will come into effect in 2017.

THE NEW EU ENERGY EFFICIENCY CLASSES AS DEFINED BY THE REGULATION

<table>
<thead>
<tr>
<th>ENERGY EFFICIENCY CLASS</th>
<th>BOILERS AND MID-TEMPERATURE HEAT PUMPS 47/35°*</th>
<th>LOW TEMPERATURE HEAT PUMPS 30/35°*</th>
</tr>
</thead>
<tbody>
<tr>
<td>A++</td>
<td>$\eta_s &gt; 150$</td>
<td>$\eta_s &gt; 150$</td>
</tr>
<tr>
<td>A*</td>
<td>$125 &lt; \eta_s &lt; 150$</td>
<td>$150 &lt; \eta_s &lt; 175$</td>
</tr>
<tr>
<td>A</td>
<td>$98 &lt; \eta_s &lt; 125$</td>
<td>$123 &lt; \eta_s &lt; 150$</td>
</tr>
<tr>
<td>A</td>
<td>$90 &lt; \eta_s &lt; 98$</td>
<td>$115 &lt; \eta_s &lt; 123$</td>
</tr>
<tr>
<td>B</td>
<td>$82 &lt; \eta_s &lt; 90$</td>
<td>$107 &lt; \eta_s &lt; 115$</td>
</tr>
<tr>
<td>C</td>
<td>$75 &lt; \eta_s &lt; 82$</td>
<td>$100 &lt; \eta_s &lt; 107$</td>
</tr>
<tr>
<td>D</td>
<td>$61 &lt; \eta_s &lt; 75$</td>
<td>$80 &lt; \eta_s &lt; 100$</td>
</tr>
<tr>
<td>E</td>
<td>$59 &lt; \eta_s &lt; 61$</td>
<td>$80 &lt; \eta_s &lt; 98$</td>
</tr>
<tr>
<td>F</td>
<td>$55 &lt; \eta_s &lt; 59$</td>
<td>$80 &lt; \eta_s &lt; 95$</td>
</tr>

Heat Pumps minimum energy efficiency level from September 2017

ANTICIPATING THE CHANGES: CIAT UNIQUE EXPERTISE AND ASSETS

With highly skilled Research & Development experts and facilities among the largest dedicated to HVAC in Europe, CIAT stands out as a leader and its product offering is already in line with the Ecodesign regulation.

ULTRA MODERN LABORATORIES

CIAT benefits from unique facilities, both in terms of cooling coverage, air treatment capacities and measurement accuracy.

Cooling:
- 15 individual test rooms
- ambient control from -25°C to 55°C
- total test capacity of 6 MW

Ventilation:
- acoustics, aeraulics, characterisation of heat recovery systems
- wall panels insulation, casing air leakage and strength, filter by-pass leakage
- air flow testing on heat recovery units from -10°C to +90°C
- individual unit test capacity up to 35 000 m³/h, humidity from 30 % to 90 %

EUROVENT CERTIFICATION AND TESTING CRITERIA

Although products and performances are assessed in CIAT’s laboratories under their application conditions, CIAT also supports and participates to stringent independent Eurovent certification programs for refrigeration, air conditioning, air handling and heating products including tests in accordance with relevant European standards (EN14511, EN14825, EN16147...).

The list of CIAT’s certified products and data can be checked on the certification body website http://www.eurovent-certification.com. For product under the scope of those regulations Eurovent LCP-HP, European HP are relevant programs.

NEW ENERGY LABEL FOR HEAT PUMPS

Space heating application

Energy class Ø 30/35° [always under average climate]

Sound power indoor unit dB (A)

Heating capacity (P rated) Ø 35° under colder, average & warmer climates

Sound power outdoor unit dB(A)
CIAT: LEADING THE WAY TO SUSTAINABLE COMFORT

CIAT is one of Europe’s leading names in heat pump heating, summer comfort and air handling solutions for the residential, commercial, healthcare and industrial sectors. From product design to the definition of water-source systems, CIAT provides solutions based on three fundamentals - comfort, optimisation of energy consumption, and improvement of indoor air quality of buildings. Such triple expertise allows CIAT to offer sustainable systems that guarantee highly advanced energy-efficient equipment that meets environmental certifications and standards.

HEAT PUMPS & ECODESIGN IMPACT

By 2020, the estimated annual energy saving induced by the Ecodesign regulation 813/2013* will amount to 19000 PJ**, the equivalent of:

- 78 million vehicles removed from the road for one year***
- 55 million homes’ electricity use saved for one year***

**PJ = 10^15 Joule

***According to the United States Environmental Protection Agency Green Power Equivalency Calculator.

CIAT SOLUTIONS: ONE STEP AHEAD OF REGULATION

The AQUACIATPOWER High Efficiency chillers rated A+ and the geothermal heat pumps GEOCIAT™ POWER rated A++ illustrate CIAT’s advance regarding regulations and sustainable thinking.

AQUACIATPOWER HE

GEOCIAT™ POWER

By 2020, the estimated annual energy saving induced by the Ecodesign regulation 813/2013* will amount to 19000 PJ**, the equivalent of:

CIAT AT YOUR SERVICE

At CIAT, our objective is to provide high quality service and develop partnerships with you throughout the lifecycle of your HVAC system. We understand your changing needs, develop smart services and energy solutions that optimise energy performance and enable savings.

We provide the support you need to get the most out of your solution:

- Preventive and corrective service maintenance.
- On-site inspection by experts close at hand
- Online parts shop.
- Dedicated hotline for off-site technical support.

We also offer you a comprehensive range of smart services:

- Consultancy service on energy performance upgrade.
- Advanced monitoring and plant system management solutions.
- Equipment and system modernization.
