Air to Air Heat Exchanger

VN-M####HE

Toshiba air conditioning has recently introduced a new range of
Air to Air Heat Exchangers the VN-M series.

This guide shows the general set-up procedures for the unit, associated controls and accessories.

Toshiba VN-M units are equipped with the TCC link controls logic, which allows the equipment to be controlled by a number of Toshiba control options currently available, i.e., standard control, one unit one remote via either the NRC-01HE, (dedicated remote for the air to air range), or via the RBC-AMS41-E (ON / OFF function ONLY) remote controller.

Units can be group controlled either specifically air to air, up to 8 units within a group, or air to air units can be incorporated into an air conditioning group.

The units can also be controlled via any of the Central control or BMS options.

In short all the options available for standard Toshiba air conditioning equipment are also available for air to air products.

The range covers three variants.

- 1) Standard air to air units with an Air Volume range from 150 m³/hr to 2,000 m³/hr 9 products in total.
- 2) Air to Air with DX-Coil covering Fresh Air Loads of 4.10, 6.56 and 8.25 kW Cooling duty and Air Volumes of 500 m³/hr, 800 m³/hr and 950 m³/hr
- 3) Air to Air with DX-Coil and Humidifier, Fresh Air Loads of 4.10, 6.56 and 8.25kW Cooling duty, air volumes of 500 m³/hr, 800 m³/hr and 950 m³/hr, plus a Permeable Film Humidifier of 3, 5 and 6 kg/hr.
- 4) Dedicated remote controller, RBC-NRC01HE.
- 5) Ancillary Pre-Heaters #kW, ##kW, ###kW (RBC-VNMF1, 2, 3, 4.)
- 6) Pre-Heater Control. (RBC-VNMC).
- 7) Remote Interface (RBC-VNL1).

Installation.

▼ VN-M150 to 1000HE

▼ VN-M1500 and 2000HE

Installation

Cool Designs Ltd

Raising the Standards in Air Conditioning Distribution

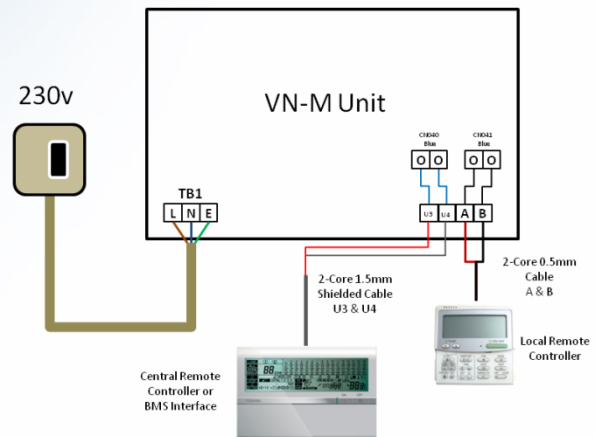

Wiring.

Standard.

A 10 amp, 230 volt power supply is applied to terminals L, N & E

Local controllers are connected to terminals A & B

Central controllers / BMS gateways are connected to terminals U3 & U4

When being used as an Individual unit, “bit” switch **SW703 bit 4** must be turned to the **ON** position, factory default is OFF.

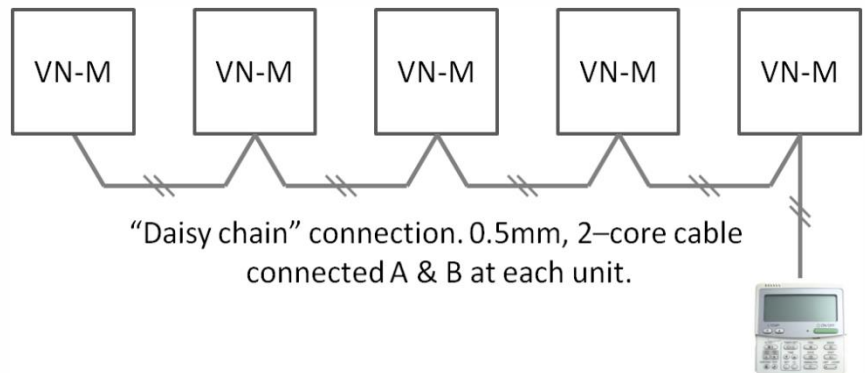

Group Configuration.

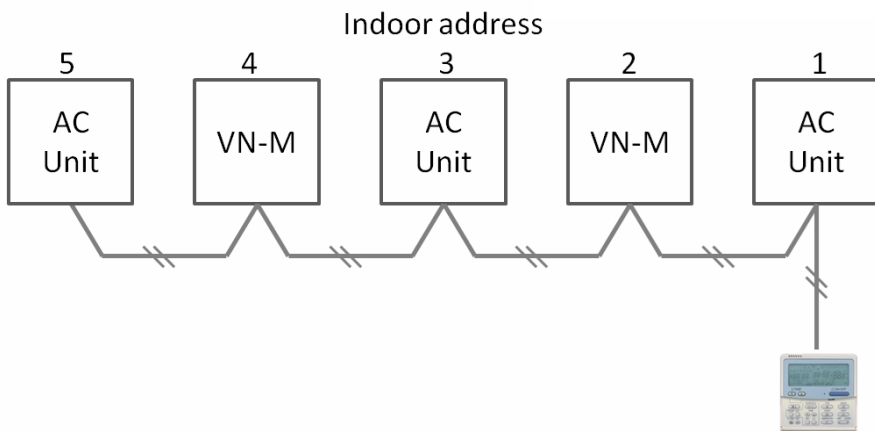

Up to 8 units can be group controlled.

Using a 2-core 0.5mm cable

Connected to terminals A & B at each unit within the group.

“Daisy chain” connection. 0.5mm, 2–core cable connected A & B at each unit.

A “group” can comprise of up to 8 units of any combination, RAV, VRF, VN-M indoor units.

Wiring is the same as above.

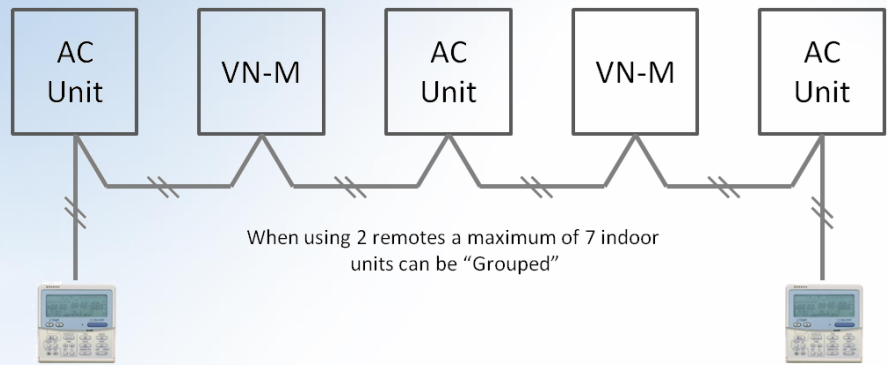

Cool Designs Ltd

Raising the Standards in Air Conditioning Distribution

When a "group" is controlled via two remote controllers, the quantity of units drops to a maximum of 7.

Wiring is the same as above.

Electrical "Dip Switches" and their purpose

There are 4 "Banks" of "Dip Switches. Two banks of two and two banks of four.

SW301 - "Terminal – End of Line" resistor. ON = 100Ω.

OFF = None

SW701 – Pulse/Static ON = Pulse. **OFF = Static.**

SW702 – (1 to 4) Indoor unit address. (See chart)

SW703 – (1 to 2) Indoor unit address.

(Factory default ALL OFF indoor address No 1.)

(3) Central controller address. ON = Fix, **OFF = Auto**

(Leave value OFF)

(4) ON = Header (Individual) **OFF = Follower**

(Factory default follower)

Indoor unit address switch (●: ON —: OFF)

Address	Address switch number				Address switch number		Address switch number				Address switch number		Address switch number

VN-M units default to system number 31, this cannot be adjusted

Cool Designs Ltd

Raising the Standards in Air Conditioning Distribution

Examples

Single VN-M unit with local remote.

SW301 – (1 & 2) = OFF

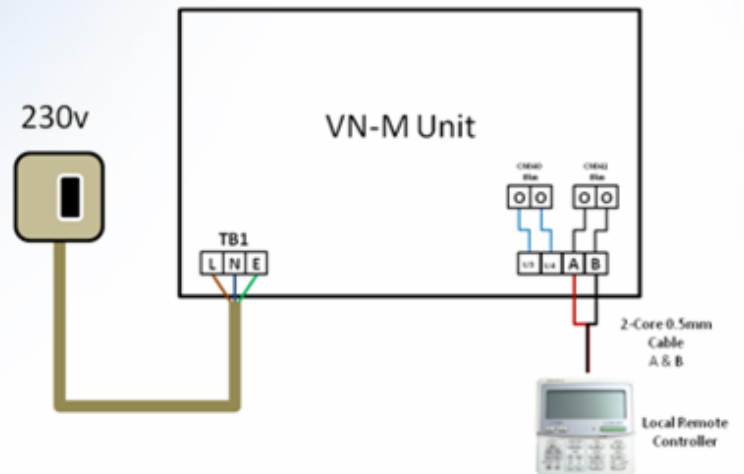

SW701 – (1 & 2) = OFF

SW702 – (1 to 4) = OFF

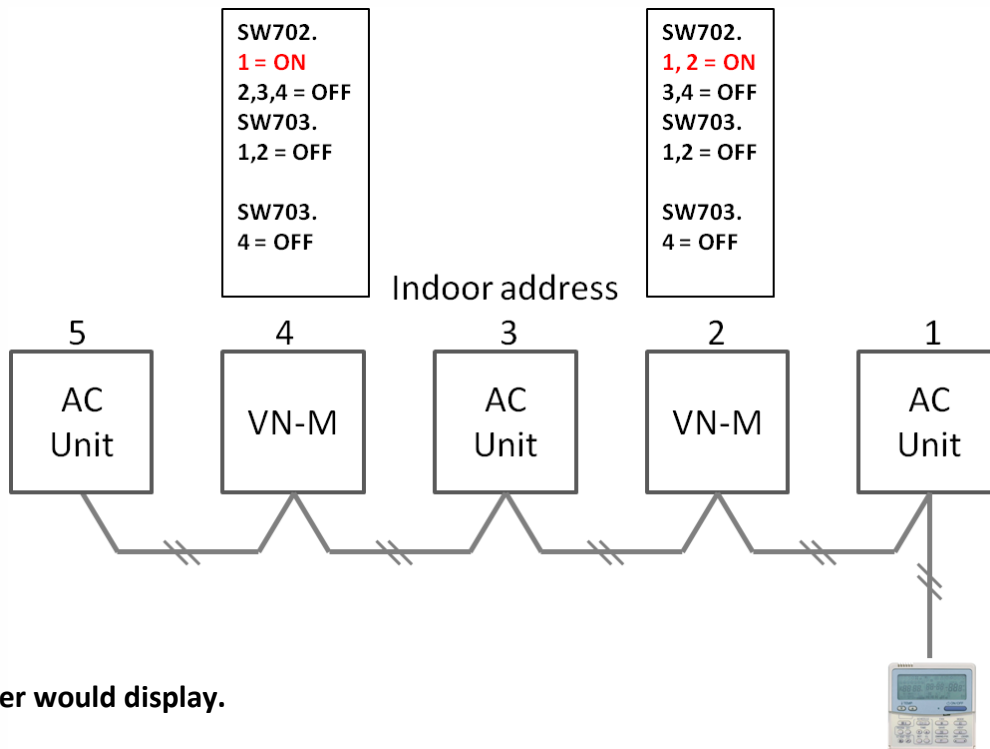

SW703 – (1 to 2) = OFF

SW703 – (3) = OFF

SW703 – (4) = ON

Multiple units within a group.

Controller would display.

1 – 1, 31 – 2, 1 – 3, 31 – 4, 1 – 5

Red = System (i.e. Outdoor unit), Black indoor address,

(Note: VNM units are locked to system address 31)

Cool Designs Ltd

Raising the Standards in Air Conditioning Distribution

Control options and the functions associated with them.

RBC-NRC01HE – Standard VNM remote controller, available functions;

ON / OFF

Fan Speed (High – Low)

Ventilation mode, (Automatic, Heat Exchanger, Bypass.)

Timer (OFF, Repeat OFF, ON timer, 168 hours in ½ hr increments NOT clock based NO day omit available. “Sleep Timer”)

This controller can also be used to control standard air conditioning units along with VNM units either singular or within a group of units, remaining functions are available for standard air conditioning units, were applicable.

RBC-AMS41E – Enhanced remote, when used with VNM units the following functions are available;

ON / OFF

Scheduled Timer (7 Day Time Switch)

Clock based, with day omit.

The following remote controllers are not suitable for connecting on a “One to One” basis.

RBC-AMS51

RBC-AMT31/32

RBC-AS21/41

Infra-Red

Accessories.

RBC-VML1 VN Unit Interface Lead

The lead will allow the VN unit to be controlled from volt free contact closures. Separate contacts are required for on/off, remote controller lock, increased fan speed and damper position.

Installation

The interface lead must be plugged into the CN705 connector on the VN unit PCB. If the lead is used with a remote controller it will operate in last one touched mode. If the VN units are grouped the lead can be connected to any VN unit in the group. Please see Installation manual supplied with the VN unit for details.

Remove the screws to expose the PCB pass the Interface cable from the Electrical box out through the provided bushes. Connect the ring crimp terminal to the provided earth screw inside the electrical box.

Ensure the VN unit is set to static input SW701 bit Sw1 OFF (This is set at unit shipment from the factory).

The links between the common (Green Cable) and the selected input are to be connected to a volt free contact.

Pre-Heaters.

There are four options available

Model	Heater Size	Duct Diameter	VN Model
RBC-VNMH1	1x1kW Heater	100	VN-M150HE
RBC-VNMH2	1x1kW Heater	150	VN-M250HE & VN-M350HE
RBC-VNMH3	2x1kW Heater	200	VN-M500HE & VN-M650HE
RBC-VNMH4	2x1kW Heater	250	VN-M800HE & VN-M1000HE

Currently there are NO Pre-Heater kits available for the VN-M1500HE or the VN-M2000HE units.

Each heater option requires a controller (RBC-VNMC).

The heater will only operate when the temperature of the air in the duct is below the pre-set value.

The controller will also provide a run on when the unit stops

Time Switch Control

There are a number of options available for time switch control.

Option 1) TCB-EXS21TLE 7-day weekly / schedule timer complete with day omit, used in conjunction with the RBC-NRC01HE remote controller.

Option 2) RBC-SMT1 timer interface lead, connects in the rear of the RBC-NRC01HE via the CN02 connector and provides an external volt free switching circuit, for connection to a third party timer.

Option 3) RBC-VML1 VN Unit Interface Lead, electrical details available within this publication.
